FOREWORD

The updated FY 82 Army Study Program presented herein includes command and agency agenda for the remainder of the fiscal year. The study program will continue to be updated on a quarterly basis.

These studies include a broad class of intellectual activity characterized by the application of the tools of operational or systems analysis to Army problems. The studies are analytical examinations to assist Army decisionmakers. They develop assessments, alternatives, recommendations, or supporting methodologies. They contribute to greater understanding of relevant issues and lead to conclusions and recommendations for use by decisionmakers. The central purpose of each study is to support action when there is a reasonable expectation of a significant contribution to decisionmaking or policy development.

These studies are performed by, or with assistance from specially formed ad hoc task groups, organizational staff personnel, in-house Army study organizations, appointed or contracted consultants or experts, commercial study organizations, or nonprofit organizations.

Accomplishment of individual study efforts and allocation of necessary resources will be accomplished in accordance with the policies and instructions in AR 5-14, AR 5-5 and DA PAM 5-5.

Two new data items have been added to this edition of the TASP. The first added item is the Defense Technical Information Center (DTIC) accession number. This addition will enable personnel to more easily perform research, as well as insure that studies are, in fact, reported to DTIC as required. The second new data element is the contract level of effort (CLOE), expressed in professional staff years (PSY). The CLOE is an agency's estimate of the level of work required to accomplish the study effort. A PSY for CLOE represents the services of one researcher or analyst supported by a proportionate share of the management, clerical, and administrative personnel, ADPE and appropriate overhead for 1 year.

CHAPTER 1

STUDY PLANNING GUIDANCE

1. INTRODUCTION. This chapter contains Department of the Army FY82 Study Planning Guidance. The guidance was provided previously to MACOMs and agencies for developing their portions of the Army Study Program for FY82.

2. BACKGROUND. Study Planning Guidance communicates to Army commands and agencies intentions of Army leadership about where the study program should be heading and indicates specific topics to be addressed. It does not exclude additional studies in areas of special interest to commands and agencies. Included in Study Planning Guidance are priority problem areas (PPA) that the Army will face which can profitably use additional study emphasis. A priority problem area will be included in Study Planning Guidance as long as it remains a high priority and unresolved critical issue. Agency heads and MACOM commanders must ensure that the limited study resources are directed toward areas having the greatest probability of producing timely and useful results. Good results must be put to good use.

3. PRIORITY PROBLEM AREAS (PPA). Each year, Army leadership establishes areas for priority study. These PPA describe salient aspects of critical Army problems. Each PPA is assigned to an appropriate HQDA Staff agency, designating responsibility to coordinate preparation of a study subprogram adequate for a thorough and integrated approach to solutions. Agency heads and MACOM commanders must ensure that their study programs reflect a coherent plan for resolution or substantial progress within the time frame of the program. FY82 PPA are listed and described below:

a. How should we organize the force?

(1) Goal: To provide a balanced structure which can effectively meet all likely contingencies, and which is able to operate efficiently with other services and allies.

(2) Priority Problem Area #1: Force Design, Planning, and Programing - Great economies or increases in effectiveness may be possible through improved balancing of force elements in conjunction with the integration of all actions necessary to field equipment (transition planning). (Coordinating Responsibility - ODCSOPS)

(a) Preferred balance of combat, combat support, and combat service support units.

(b) Optimal Reserve Component structure for state and federal missions.

(c) Integration of theater logistics, including planning for host nation support (HNS).

(d) Development of techniques and tools for force structure trade-off analysis (FSTA).

(e) Trade-off between Services of equipment and force structure capable of satisfying joint requirements and/or functions.

b. How should we man the force?

(1) Goal: To recruit and retain high quality military and civilian personnel and to use them efficiently.

(2) Priority Problem Area #2: Manpower Availability and Personnel Management - The Army is suffering from qualitative and quantitative shortages in all components and must make efficient utilization of available human resources. (Coordinating Responsibility - ODCSPER)

(a) Competitive pay and benefits for personnel.

(b) Definition and provision of adequate quality of life for all personnel.

(c) Improved Army policies and activities to attract, recruit, and retain qualified personnel.

(d) Determination and justification of requirements for civilian personnel resources.

(e) Manpower aspects of efficient TOE/MTOE/TDA design.

c. How should we equip the force?

(1) Goal: To design, develop, and procure in a timely manner sufficient quantities of modern, maintainable, and affordable materiel systems.

(2) Priority Problem Area #3: Modernization - Because of rapid threat modernization, the Army's materiel acquisition process needs improvement. (Coordinating Responsibility - ODCSRDA)

(a) Reduction of concept to fielding time in the materiel acquisition process.

(b) Assuring consideration of personnel, logistics, facilities and training needs in development planning and decisionmaking.

(c) Trade-off between quality and quantity.

(d) Development of improved methods for the prioritization of materiel requirements.

(3) Priority Problem Area #4: Command, Control, Communications, and Intelligence Systems (C3I) - A new generation of C3I systems appear to be large force multiplier, but are still not coherently integrated into organizational and operational concepts. (Coordinating Responsibility - ODCSOPS)

(a) Measures of effectiveness for design of overall systems.

(b) Interoperability and interface with Army Reserve Component, DOD/Joint systems, and allies.

(c) Adequate survivability support and backup systems (to include facilities).

(d) Fusion of tactical intelligence, target acquisition and combat information.

(e) Methodology and technology for battlefield information systems.

d. How should we train the force?

(1) Goal: To train individuals and units to an appropriate level of proficiency in order to get the most effectiveness possible out of the combination of materiel systems and personnel resources.

(2) Priority Problem Area #5: Training - The increasing costs and complexity of equipment and shortages of personnel imply the need for large increases in the effectiveness and efficiency of training. (Coordinating Responsibility - ODCSOPS)

(a) Measurement of the benefits of training and requirements for desired levels of effectiveness.

(b) Exploitation of the efficiencies of training simulators.

(c) Increasing personnel motivation through improved training methods and meaningful activities.

e. How should we mobilize the force?

(1) Goal: To prepare the Army rapidly for meeting various contingencies including activating the Reserve Component, distributing equipment, completing training programs, filling out structure and mobilizing the production base.

(2) Priority Problem Area #6: Mobilization - Mobilization plans have never been fully tested dynamically against the range of circumstances that may arise. (Coordinating Responsibility - ODCSOPS)

(a) Evaluation and improvement of the mobilization decision process considering conditions of uncertainty and changing plans.

(b) Development of mobilization management concepts for integrating personnel, equipment, training and facility resources to include management of IRR and equipment left behind by units deploying to POMCUS.

(c) Adequacy of facilities, training base, mobilization TDA, personnel, equipment, and management information systems for full and total mobilization.

f. How should we deploy the force?

(1) Goal: To reinforce deployed forces, or to introduce forces for contingency operations, in a timely, coordinated and secure manner.

(2) Priority Problem Area #7: Deployment - Increasing threat capabilities on the sea and in the air put into question our ability to reinforce rapidly. (Coordinating Responsibility - ODCSOPS)

(a) Ability to limit or circumvent the effects of port, airhead and line of communication (LOC) interdiction.

(b) Defense of POMCUS.

g. How should we sustain the force?

(1) Goal: To provide the force with appropriate strategy, doctrine, and tactics to enable it to deter war or, if necessary, fight successfully at any level and for as long as an opponent is able to continue.

(2) Priority Problem Area #8: Initial Force Effectiveness and Survivability - The first few weeks of a war in Europe, Korea or the Middle East are likely to be intense and continuous. The Army's initial force must be able to defend successfully under a wide variety of environmental conditions until reinforcements arrive. (Coordinating Responsibility - ODCSOPS)

(a) Improvement of tactical warning.

(b) Procedures for force maintenance, restoration, and replacement.

(c) Development of improved indicators of total readiness (unit vs. force readiness).

(d) Development of the best doctrine and tactics necessary to fight the force.

(3) Priority Problem Area #9: Theater Nuclear and Chemical Warfare - The Army doctrine for nuclear and chemical operations is still not fully defined, nor fully integrated with conventional doctrine. (Coordinating Responsibility - ODCSOPS)

(a) Definition and evaluation of NATO options for employment of nuclear and chemical systems.

(b) Development of measures and criteria of deterrence.

(c) Plans for sustaining operations during and after nuclear and/or chemical phases.

(4) Priority Problem Area #10: Sustainability/Support to the Forces in the Field - The Army's ability to provide effective support to sustain combat forces on the battlefield is essential in view of growing threat capabilities. (Coordinating Responsibility - ODCSLOG)

(a) Development of balanced sustaining/combat support capability to include essential materiel, services, transportation and tactical support forces.

(b) Determination of required duration of sustainability.

(c) Definition of the requirements for wholesale base, war reserves, and industrial preparedness.

(d) Reduction of the Army's energy vulnerability.

(e) Logistics preparation for rapid transition to wartime operations.

CHAPTER 2

FY82 STUDY PROGRAM BY MAJOR DOD STUDY CATEGORIES

1. This chapter contains alphabetical listings of programmed FY82 studies by sponsoring agency or command, within each of eight study categories established by DODD 5010.22. Asterisks denote new studies which are being initiated during FY82. All other studies are ongoing from prior years.

2. The method column refers to the type of performance for the conduct of the study: in-house, contract, or both (which includes in-house and contract efforts). The Defense Technical Information Center accession number is displayed if it is reported to HQDA by the sponsoring agency.

3. The eight study categories are indicated below:

Category 1 (Manpower and Personnel Studies). Evaluation of the manpower requirements and costs of forces and programs and application of effective methods and policies for the recruitment, selection, testing, classification, training, allocation, assignment, compensation, grade controls, career management, sustaining, and separating of personnel.

Category 2 (Concepts and Plans Studies). Evaluation of concepts, policies, techniques, methods, and systems in terms of their costs of effectiveness to determine preferred employments of the several forces and development of programs, postures, and strategies which optimize the attainment of US objectives in potential or actual conflict.

Category 3 (Operations and Force Structure Studies). Determination of preferred mixes of combined forces to meet existing and potential threats to US security; establishment of quantitative requirements for weapon systems or other military materiel or the comparison of the effectiveness and costs of alternatively constituted and equipped forces; and the development and application of techniques to study military operations and tactics and describe or evaluate the results of combat engagements.

Category 4 (Installations and Logistics Studies). Determination and application of improved methods for effective and efficient operation of all logistics activities of the DOD, including procurement, production, supply, installations, military construction, real property, facilities, housing maintenance, transportation, distribution, support, international logistics, and related logistics services.

Category 5 (Science, Technology, Systems, and Equipment). Evaluation of technical concepts, systems, subsystems, and components to compare their cost benefits and effectiveness in relation to competing concepts, systems, subsystems, and components and the determination of alternative R&D programs and the selection of programs that yield the greatest return from expenditure for R&D. Includes the development of mission envelopes of individual systems and equipment.

Category 6 (Management). Evaluation of organizational structure, administrative policies, procedures, methods, systems, and distribution of functions and the applications of the management sciences which will achieve more efficient and economical operation and elimination of unnecessary overlap or duplication of effort.

Category 7 (Intelligence). Estimation of foreign force capabilities projection and estimation of foreign force levels and performance as a basis for combination in the formulation of specific threats to the security of the United States and its forces; analysis and comparison of intelligence systems and the relative capabilities of the United States and foreign forces in a net assessment; improvement of the collection and analysis of data on foreign forces; and the quality and management of intelligence.

Category 8 (International Security). Evaluation of present and alternative Defense policies, concepts, and positions related to the identification and attainment of national security objectives. Subject matter includes determination of the impact of international, political, military, and economic affairs on currently approved and planned strategies and programs; also studies and analyses on arms control and disarmament, alliances, foreign military facilities and operating rights, status of forces, National Security Council Affairs and security assistance matters; evaluation of the status of competition between the United States and foreign adversaries in producing, maintaining, and operating military forces, and studies aimed at characterizing key military balances.

CHAPTER 3

FY82 AGENCY AND COMMAND STUDY PROGRAMS

This chapter contains alphabetical lists of studies, by sponsoring agency or command, programed to be conducted in FY82. Asterisks denote new studies which are being initiated during FY82. All other studies are ongoing from prior years. The category column refers to the eight study categories established by DODD 5010.22.

The method column refers to the type of performance for the conduct of the study: in-house, contract, or both (which includes in-house and contract efforts).

The study number column refers to the number assigned by the SPMO to each study. The first two digits of each number indicate the year that the study was initiated (ongoing studies initiated prior to FY79 are assigned "79"). The third digit indicates the programed status of a study: a "one" indicates that the study was programed at the beginning of the fiscal year and a "zero" indicates that the study was unprogramed at the beginning of the year. The last four digits represent a unique number assigned by the SPMO to each study for identification purposes.

The Defense Technical Information Center accession number and contract level of effort (CLOE) are displayed if reported to HQDA by the sponsoring agency. CLOE is expressed in professional staff years (PSY). One PSY for CLOE represents the services of one researcher or analyst supported by a proportionate share of the management, clerical, and administrative personnel, ADPE and appropriate overhead for 1 year.

CHAPTER 4

FY82 STUDY PROGRAM BY SPG AREA

This chapter contains alphabetical lists of studies by sponsoring agency or command, within each SPG area, programed to be conducted in FY82. Asterisks denote new studies which are being initiated during FY82. All other studies are ongoing from prior years. The sponsor and method of performance are given for each study. Studies not listed in this chapter were reported as not being applicable to one of the SPG areas.

ARMY STUDY COORDINATORS

1. Each Army Staff agency and major command has designated a Study Coordinator whose duties include --

a. Advising the agency head or commander on all matters concerning the conduct and administration of studies, and the resources (dollars and professional staff-years) required for studies.

b. Developing an annual agency/command study program and supporting study budget.

c. Serving as the agency or command point of contact for outside agencies on all study matters.

d. Monitoring the agency or command study requirements.

e. Assisting Study Advisory Group members and study action officers in the management of the individual study efforts.

2. A current listing of Army Study Coordinators is provided at page A-2.

IN-HOUSE STUDIES AND ANALYSES AGENCIES AND REFERENCE FACILITIES

Information is provided concerning Department of the Army Studies and Analyses Agencies capable of providing in-house study support. Additionally, information is provided concerning DOD study reference facilities maintained by the Defense Technical Information Center (DTIC) and the Defense Logistics Studies Information Exchange (DLSIE). A brief description of each organization's capability and appropriate points of contact are provided. Members of the study community are required to follow appropriate coordination/tasking procedures to ensure availability of desired support within mutual capabilities, missions, and functions.

a. DA In-house Studies and Analysis Agencies.

(1) U.S. Army Materiel Systems Analysis Activity (AMSAA). The U.S. Army Materiel Systems Analysis Activity is responsible for providing the central independent technical capability for DARCOM for the development/conduct of systems analyses and cost effectiveness studies and for providing quantified assessments/estimates of materiel effectiveness (performance) in the total envisioned spectrum of the combat/combat support/combat service support environment. AMSAA serves as the DARCOM center for reliability, availability, maintainability (RAM) assessment of materiel systems, conducts system survivability analyses of developmental and fielded equipment/systems and, in addition, estimates materiel system effectiveness (performance) in the total envisioned spectrum of the combat/combat support/combat service support environment. This responsibility includes consideration of readiness aspects of performance, the integration of materiel systems on the battlefield, and materiel interoperability. AMSAA designs development, product improvement, surveillance, and other tests and conducts independent evaluations in order to provide a meaningful basis for major decisions concerning Army materiel system life cycle aspects to include design, development, acquisition, employment, deployment, and logistics supportability. An additional responsibility is that of coordinating and administering, at the request of the Joint Technical Coordinating Group/Munitions Effectiveness, joint review efforts to improve analytical methodology and the data bases used in the determination of nonnuclear weapon system effectiveness. AMSAA maintains direct contact with Army materiel users and identifies materiel problems of users in the field, surfaces these problems in DARCOM, and monitors solution progress to ensure response in a timely manner. Additionally, AMSAA provides an overview for DARCOM of the

worldwide life cycle surveillance program of the reliability and performance of nuclear and nonnuclear ammunition, missiles, and materiel systems in deployment or stockpiles, and also provides special systems analysis support to DARCOM major Army subcommands, projects/product managers, and other activities throughout DOD.

(2) Combined Arms Combat Development Activity (CACDA). The Combined Arms Combat Development Activity is responsible for developing concepts,

doctrine, organization and force structure, and materiel requirements for echelons above corps, corps, division and brigade within the combined arms functional areas of combat, combat support, combat service support, and command and control. To accomplish the above, various study and test efforts require technical expertise in the arenas of operational research, systems analyses, economic analysis, wargaming, computer modeling, and field test evaluation.

(4) Engineer Studies Center (ESC). ESC accomplishes studies that require assessment of the various interactions and implications affecting decisions relative to engineer systems. This generally involves applying interdisciplinary, engineering, and operations research skills in a flexible systems approach to problems susceptible to the Center's particular competency. Through studies ESC: (a) assists the commander, USACE in executing policies relative to his direct command management responsibilities as principal advisor to the Chief of Staff on engineering matters; (b) assists Office of the Chief of Engineers and engineer (or engineer-dependent) field elements in implementing and operating the varied systems integral to achieving USACE goals and objectives; and (c) provides direct support to Army FOAs, other MACOMs, DA, and other DOD agencies in accomplishing projects where engineer or engineer-related technical factors and considerations are a primary component of an Army-wide problem.

(5) U.S. Army Intelligence and Security Command (INSCOM): The Intelligence and Threat Analysis Center (ITAC) under INSCOM is responsible for Army production of intelligence and threat analysis. Threat analysis is directed at evaluating the ability of a potential enemy to neutralize or degrade the effectiveness of current or projected Army equipment and doctrine, tactics and organization. ITAC develops threat data on potential enemies, based on current intelligence output but subjected by ITAC to additional projective analysis during which current intelligence is interacted with Army force, combat and materiel proposals to develop response threats, response options, and future oriented enemy capabilities studies for use by the Army. Concentration is on major developmental systems and DA sponsored force planning and combat development activities. Products are intended to support combat, materiel and force developers in analyses conducted as part of the Army Study Program. Indepth analysis of specific topics or subjects in current capabilities of selected foreign nations is also conducted. ITAC does not assess the impact of threat on U.S. Army plans, studies, projects or systems.

(6) Logistics Evaluation Agency (LEA). The Logistics Evaluation Agency is primarily responsible for executing policies prescribed by the DCSLOG, HQDA in the execution of his General Staff responsibilities for development and supervision of the Army logistics organization and system. This includes: assessing the total logistics readiness and sustainability of the Army; serving as the independent logistician in the materiel acquisition process; and providing technical guidance, procedures, and assistance to the Army in its execution of policy, directives, and guidance issued by the DCSLOG, HQDA.

(8) Strategic Studies Institute (SSI). The Strategic Studies Institute conducts strategic studies on the nature and use of the U.S. Army during peace and war; which support Army participation in joint arenas with respect to broad issues of national security; addresses major concerns for which an independent, internal study capability is needed by the Army; and, contributes independent studies and analyses on issues of current or future import to the Army. The Institute is specifically designed to support the Army from the perspective of the Chief of Staff as a member of the JCS, and as an actor in the NSC community, and to deal with broad, high-level issues of national security, strategic concepts, and strategic theory.

(9) TRADOC Systems Analysis Activity (TRASANA). The TRADOC Systems Analysis Activity serves as the principal analysis center within TRADOC in both combat and training development arenas. The Activity conducts, monitors, supervises, reviews, and/or evaluates analyses for the CG, TRADOC in support of his responsibilities in the weapons systems acquisition process. The primary type of analyses conducted by TRASANA are mission area analyses (MAAs), cost and operational effectiveness analyses (COEAs), and training effectiveness analyses (TEAs). Additional analyses are conducted in such areas as survivability, vulnerability, countermeasures, counter-countermeasures, and electronic warfare. The Activity also has the mission of developing, jointly with CACDA, the next and succeeding generations of combined arms combat models to support combat and training developments activities TRADOC-wide.

(10) U.S. Army Soldier Support Center. The Soldier Support Center is responsible for serving as the focal point for combat development and the integration of doctrine; education; and training in the areas of personnel management, administration, financial management and computer based information systems. Major responsibilities include: planning for the mobilization mission; materiel requirements with emphasis on support

of units engaged in combat operations; assistance in testing and evaluating established and proposed personnel, administrative and finance systems to determine their impact on organizations in the field and their capability and suitability for combat operations; and preparation of doctrinal literature for proponent areas.

b. Department of Defense Reference Facilities.

(1) Defense Technical Information Center (DTIC). The Defense Technical Information Center is the central facility within the Department of Defense for the interchange of scientific and technical research data collections on a secondary distribution basis. Included in their document collection, in addition to DOD sponsored reports, are those received from other U.S. Government agencies and from several foreign nations on a reciprocal or voluntary basis. Defense agencies and their associated contractor researchers are required to deposit information (both classified and unclassified, up to and including Secret and Restricted Data) into the various data bases maintained by DTIC for the subsequent retrieval of registered users. These data collections include the Technical Report (TR) Program, which contains citations to published research; the Research and Development Program Planning (R&DPP) consisting of descriptions concerning planned research; an Independent Research and Development (IR&D) data base, containing descriptions of contractor efforts in current research (proprietary information); and finally, the Research and Technology Work Unit Information System (WUIS), containing work unit information summaries of Defense sponsored efforts in research and technology. The Research and Technology Work Unit Summary (DD Form 1498) submitted to DTIC, in accordance with AR 5-5 (paragraph 3-6a), is part of the DTIC data collection supporting Army studies.

(2) Defense Logistics Studies Information Exchange (DLSIE). The Defense Logistics Studies Information Exchange has been assigned the mission of collecting, organizing, storing, and disseminating information relating to the DOD logistics study effort and logistics management documentation that may be of interest to the logistics community. DLSIE's authority is found in DOD Instruction 5154.19, with AR 5-7 being the

Army's implementing regulation for the DOD Instruction. AR 5-5 also requires input into the DLSIE data base, and use of the data base by various Army organizations responsible for conducting logistics studies.

In accomplishing its assigned mission, DLSIE provides the following products and services: The Annual DOD Bibliography of Logistics Studies and Related Documents, with three quarterly supplements; the Annual DOD Catalog of Logistics Models; Custom data base searches of the studies and models data bases; Secondary distribution of DLSIE accessions; and Selective Dissemination of Information (SDI) lists.
